IO-Link Compatible SI Unit

EX260-SIL1-X207/X210

Features

IO-Link communication enables users to check unit information and monitor unit status, in addition to ON/OFF valve control.

IO-Link

IO-Link is an open communication interface technology between the sensor/actuator and the I/O terminal that is an international standard IEC61131-9.

Send and receive ON/OFF signals + unit information/status

Sending and receiving of unit information, error detection, or condition monitoring data

<Unit Information> Manufacturer's name, product number, version information
<Error Detection> Output wiring disconnection, short circuit
<Conditioning Monitoring> Number of valve operations, operation threshold exceeded

Application Example

● Supporting periodic cylinder maintenance

The replacement time of the cylinder connected to the valve can be predicted by counting the number of valve operation instructions. This enables periodic maintenance to be performed before any unexpected cylinder failure occurs.

Supports data update cycles of 1 ms or less

Shortest data update cycle: 0.8 ms

The data update cycle can be set for the IO-Link master based on the SI unit's shortest data update cycle of 0.8 ms.

IO-Link master and SI unit can be connected with one cable

Signal wire and valve power supply wire can be connected with the same cable. (Port class B compliant: X210 specifications)
Also applicable to the types in which the signal wire and valve power supply wire are connected with individual cables. (Port class A compliant: X207 specifications)

Uses 4-wire or 5-wire unshielded cables

Special communication cables are not necessary.

A conventional 4-wire or 5-wire unshielded cable can be used for input and output of sensors, switches, etc.
(Recommended specifications: Conductor resistance 3 Ω, Wire-to-wire capacitance 3 nF or less, 20 m or less)

Caution

To ensure the safest possible operation of this product, please be sure to thoroughly read the "Safety Instructions" in our "Best Pneumatics" catalog before use.

Specifications

| Item | EX260-SIL1-X207 | EX260-SIL1-X210 |
|---|---|--|
| Protocol | IO-Link version 1.1 | |
| Communication speed | COM2 (38.4 kbps)/COM3 (230.4 kbps) (Selected by DIP switch) | |
| IO-Link port class (Communication connector) | Class A (Valve power supplied from the valve power supply connector) | Class B (Valve power supplied from the communication connector) |
| IO-Link type | Device | |
| Vendor ID | 131 | |
| Process data size | 0 byte input/4 bytes output | |
| Output | Number of outputs | 32 outputs |
| | Output type | PNP (Negative common)/Source |
| | Connected load | Solenoid valve with surge voltage suppressor of 24 VDC and 1.5 W or less (manufactured by SMC) |
| | Solenoid valve power supply | 22.8 to 26.4 VDC 2 A or less (according to the solenoid valve station specification) |
| | Residual voltage | 0.4 VDC or less |
| Control unit power supply | 18 to 30 VDC 0.1 A or less | |
| Weight | 200 g or less | |
| Standards | CE marking, UL/CSA | |

IODD files are required to configure this product.
Please contact SMC for the IODD files.
Also, please contact SMC for the operation manual.

| 33 | OUT_1E | Solenoid output 30 | 34 | OUT_1F | Solenoid output 31 |

⚠ Caution

- For dimensions when combined with the valve manifold, use the dimensions of the valve manifold where the standard EX260 series unit is mounted.
- Order the valve manifold separately. Specify “no SI unit” and “negative common” for the valve manifold specifications.
