

# Installation and Maintenance Manual

## Electro-Pneumatic Regulator (for RS232C)

ITV10\*0-RC\*\*\*\*-Q,  
ITV20\*0-RC\*\*\*\*-Q,  
ITV30\*0-RC\*\*\*\*-Q

### 1 Safety Instructions

This manual contains essential information for the protection of users and others from possible injury and/or equipment damage.

- Read this manual before using the product, to ensure correct handling, and read the manuals of related apparatus before use.
- Keep this manual in a safe place for future reference.
- These instructions indicate the level of potential hazard by label of "Caution", "Warning" or "Danger", followed by important safety information which must be carefully followed.
- To ensure safety of personnel and equipment the safety instructions in this manual and the product catalogue must be observed, along with other relevant safety practices.

|  |                |  |
|--|----------------|--|
|  | <b>Caution</b> | Indicates a hazard with a low level of risk, which if not avoided, could result in minor or moderate injury.   |
|  | <b>Warning</b> | Indicates a hazard with a medium level of risk, which if not avoided, could result in death or serious injury. |
|  | <b>Danger</b>  | Indicates a hazard with a high level of risk, which if not avoided, will result in death or serious injury.    |

#### • Electromagnetic compatibility:

This product is class A equipment intended for use in an industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments due to conducted as well as radiated disturbances.

### Warning

- **The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.**

Since the products specified here can be used in various operating conditions, their compatibility with the specific pneumatic system must be based on specifications or after analysis and/or tests to meet specific requirements.

- **Only trained personnel should operate pneumatically operated machinery and equipment.**

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced personnel.

- **Do not service machinery/equipment or attempt to remove components until safety is confirmed.**

Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.

- When equipment is to be removed, confirm the safety process as mentioned above. Switch off air and electrical supplies and exhaust all residual compressed air in the system.

- Before machinery/equipment is re-started, ensure all safety measures to prevent sudden movement of cylinders etc. (Supply air into the system gradually to create back pressure, i.e. incorporate a soft-start valve).

- **Do not use this product outside of the specifications. Contact SMC if it is to be used in any of the following conditions:**

- Conditions and environments beyond the given specifications, or if the product is to be used outdoors.
- Installations in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverage, recreation equipment, emergency stop circuits, press applications, or safety equipment.
- An application, which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.

### Caution

- Ensure that the air supply system is filtered to 5 microns.

### 2 Specifications

| Model                       | ITV*010   | ITV*030         | ITV*050         | ITV2090                  |
|-----------------------------|---|-----------------|-----------------|--------------------------|
| Min. supply pressure        | (Set pressure) + 0.1 MPa                        |                 |                 | (Set pressure) -13.3 kPa |
| Max. supply pressure        | 0.2 MPa   | 1.0 MPa         | 1.0 MPa         | -101 kPa                 |
| Set pressure range          | 0.005 ~ 0.1 MPa                                 | 0.005 ~ 0.5 MPa | 0.005 ~ 0.9 MPa | -1.3 ~ -80 kPa           |
| Supply voltage              | 24 VDC±10%                                      |                 |                 |                          |
| Current consumption         | Max. 120 mA                                     |                 |                 |                          |
| Input/output data           | 10bit/10bit (data 1023 corresponds to 100%F.S.) |                 |                 |                          |
| Linearity                   | Max. ±1%F.S.                                    |                 |                 |                          |
| Hysteresis                  | Max. 0.5%F.S.                                   |                 |                 |                          |
| Repeatability               | Max. ±0.5%F.S.                                  |                 |                 |                          |
| Sensitivity                 | Max. 0.2%F.S.                                   |                 |                 |                          |
| Temperature characteristics | Max. ±0.12%F.S./°C                              |                 |                 |                          |
| Operating temperature       | 0~50°C (without condensation)                   |                 |                 |                          |
| Protection structure        | IP65  |                 |                 |                          |
| Model                       | ITV10*0   | ITV20*0         | ITV30*0         |                          |
| Size (mm)                   | 50 x 50 x 109                                   | 50 x 50 x 131   | 66 x 66 x 152   |                          |
| Weight (No option)          | 320 g   | 420 g           | 720 g           |                          |

Table 1.

### 3 Operation Principle

When the input signal increases the supply solenoid valve ① turns on and the exhaust solenoid valve ② turns off. Supply pressure is passed to the pilot valve ③ through the supply solenoid valve. The pilot valve will open the main valve allowing partial supply pressure to pass to the out port. The pressure sensor ④ will provide output pressure feedback to the control circuit ⑤. The control circuit will balance the input signal and output pressure to ensure that the output pressure remains proportional to the input signal.

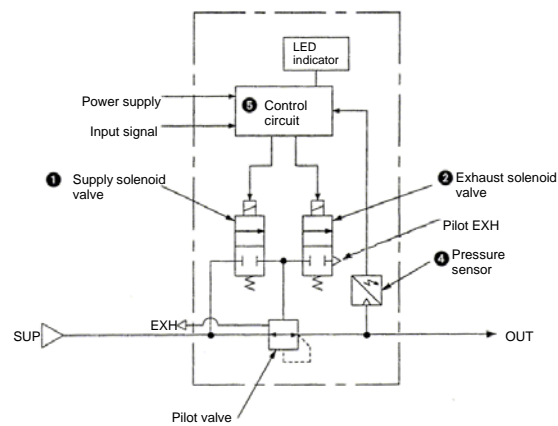

Fig. 2 - Schematic diagram

### 4 Wiring

#### Caution

Connect the cable to the connector on the main unit as shown in the following diagram. Take precautions, as incorrect wiring will damage the unit. Use a DC power supply capable of supplying the necessary power requirements with minimal ripple. When 3 m straight cable connection is specified, this refers to the power supply cable, the communications cable should be ordered separately.

| Item                        | Pin assignment | Wire colour (Note) |       |
|-----------------------------|----------------|--------------------|-------|
| Connector for power supply  | 1              | +24V               | Brown |
|                             | 2              | N.C.               | White |
|                             | 3              | GND                | Blue  |
|                             | 4              | N.C.               | Black |
| Connector for communication | 1              | N.C.               | Brown |
|                             | 2              | TxD                | White |
|                             | 3              | RxD                | Blue  |
|                             | 4              | GND                | Black |
|                             | 5              | N.C.               | Grey  |

Note: Wire colour when the optional cable is used.  
S type P398020-500-3, P398020-502-3,  
L type P398020-501-3, P398020-503-3.

### 5 LED Display and Communication Protocol

| Status                  | Power LED      | Communication LED |
|-------------------------|----------------|-------------------|
| Waiting input           | Green light ON | Light OFF         |
| Receiving               | Green light ON | Green light ON    |
| Waiting input/ at error | Red light ON   | Light OFF         |
| Receiving/ at error     | Red light ON   | Green light ON    |

#### • Communication Protocol

| Item             | Specification     |
|------------------|-------------------|
| Comm. type       | Master/slave type |
| Synchronous type | Asynchronous type |
| Comm. speed      | 9,600 bps         |
| Start bit        | 1 bit             |
| Data length      | 8 bit             |
| Stop bit         | 1 bit             |
| Parity bit       | N/A               |
| Flow control     | N/A               |
| Command end code | CR • LF           |
| Character code   | ASCII             |

### 6 Pressure Setting and Output Monitoring

#### • Set output pressure

| Command | Content                        | Response        | Content                |
|---------|--------------------------------|-----------------|------------------------|
| SET nn  | Set output pressure (0 - 1023) | nn              | 0 to 1023              |
|         |                                | Out of range    | 1023 < nn <= 9999      |
|         |                                | Unknown command | Except 0 <= nn <= 9999 |

Note) nn is limited to integral values from 0 to 1023.

#### • Increase setting for output pressure

| Command | Content                                    | Response | Content                       |
|---------|--|----------|-------------------------------|
| INC     | Adds 2 to the set data of output pressure. | mm       | Indicates the set data plus 2 |

Note) When set data nn is >= 1021, the value is set as nn=1023.

#### • Decrease setting for output pressure

| Command | Content   | Response | Content                        |
|---------|---|----------|--------------------------------|
| DEC     | Subtracts 2 to the set data of output pressure. | mm       | Indicates the set data minus 2 |

Note) When set data nn is <= 2, the value is set as nn=0.

#### • Request for set data

| Command | Content              | Response | Content           |
|---------|----------------------|----------|-------------------|
| REQ     | Request for set data | nn       | Displays set data |

### 6 Pressure Setting and Output Monitoring (continued)

#### • Request of output pressure data

| Command | Content                          | Response | Content                       |
|---------|----------------------------------|----------|-------------------------------|
| MON     | Request for output pressure data | nn       | Displays output pressure data |

Pressure setting can be done by sending input data using 10 bit as F.S. to the electro-pneumatic regulator through the master PLC.

| Set Data        | 0           | 1023      | (a/F.S.) × 1023 <sub>DEC</sub> |
|-----------------|-------------|-----------|--------------------------------|
| Output pressure | 0%×F.S.(=0) | 100%×F.S. | a                              |

EX.) To set pressure at 0.3 MPa by ITV2030 (for 0.5 MPa type)

$$(0.3 \text{ MPa} / 0.5 \text{ MPa}) \times 1023 = 614_{\text{DEC}}$$

A pressure of 0.3 MPa is set by sending input data of "614" to the electro-pneumatic regulator through the master PLC. Send "SET 614"

### 7 Installation & Maintenance

#### Caution

- This product is pre-set at the factory and must not be dismantled by the user. Contact your local SMC office for advice.
- Ensure, when installing this product, that it is kept clear of power lines to avoid noise interference.
- Ensure that load surge protection is fitted when inductive loads are present (i.e. solenoid, relay etc.).
- Ensure precautions are in place if the product is used in a 'free flow output' condition. Air will continue to flow continuously.
- Do not use a lubricator on the input side of this product. If lubrication is necessary, place the lubricator on the 'output' side.
- Ensure all air is exhausted from the product before maintenance.
- Length of connector cable shall be 10 m maximum.
