

Instruction Manual

Load Sensor

Series: XT477 Model: XT477-4-X2

The intended use of this product is to convert a load to output pressure. It is possible to construct an all air balance circuit by combining it with an air cylinder and an air operated type precision regulator, etc.

Validated according to ISO 13849, see section 2.

1 Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution", "Warning" or "Danger". They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC<sup>1)</sup>, and other safety regulations.

- <sup>1)</sup> ISO 4414: Pneumatic fluid power - - General rules relating to systems.
- ISO 4413: Hydraulic fluid power - - General rules relating to systems.
- IEC 60204-1: Safety of machinery - -Electrical equipment of machines. (Part 1: General requirements)
- ISO 10218-1: Manipulating industrial robots -Safety, etc.

This manual contains essential information for the protection of users and others from possible injury and/or equipment damage.

- Read this manual before using the product, to ensure correct

handling, and read the manuals of related apparatus before use.

- Keep this manual in a safe place for future reference.
- To ensure safety of personnel and equipment the safety instructions in this manual must be observed, along with other relevant safety practices.

	<b>Caution</b>	Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
	<b>Warning</b>	Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
	<b>Danger</b>	Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning

- **The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**
- Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
- **Only personnel with appropriate training should operate machinery and equipment.**

1 Safety Instructions - continued

The product specified here may become unsafe if handled incorrectly.

The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- **Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**

- 1) The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
- 2) When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
- 3) Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

- **Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**

- 1) Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2) Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustions and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specification described in the product catalogue.
- 3) An application which could have negative effects on people, property, or animals requiring special safety analysis outside the scope of ISO 13849 described in this document.
- 4) Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

- **Always ensure compliance with relevant safety laws and standards.**

All electrical work must be carried out in a safe manner by a qualified

person in compliance with applicable national regulations.

Caution

- **The product is provided for use in manufacturing industries.**  
The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

2 Specifications

2.1 General Specifications

Model	XT477-4-X2
Max. operating pressure	0.6 MPa
Output pressure	0.05 to 0.5 MPa
Input/output characteristics	Refer to Figure 1
Applicable cylinder diameter	63 mm
Recommended load weight	100 kg or less <sup>(Note1)</sup>
Ambient and fluid temperature	-5 to +60 °C (no freezing)
Fluid	Air
Filtration	5 µm filtration or smaller (Refer to 3.4)
Lubrication	Not required
Port size	2 x Rc1/8
Construction	Relieving type
Standard	Conforms to basic and well-tried safety principles of ISO13849-2:2012
Min frequency	1 per 30 days
Max frequency	15 times a minute
B <sub>10</sub>	790,000 cycles <sup>(Note2)</sup>
B <sub>10D</sub>	1.58 million cycles <sup>(Note2)</sup>
Weight	2.2 kg

Table 1

2 Specifications – continued

Notes:

Note 1) This value takes inertia into consideration. Please avoid eccentric load as much as possible.

Note 2) Under SMC test conditions. The B<sub>10</sub> figure is estimated from SMC life tests. The B<sub>10D</sub> figure is derived from B<sub>10</sub> using the assumption in ISO 13849-1:2015 Annex C. Contact SMC for details.

2.2 Input/output characteristics

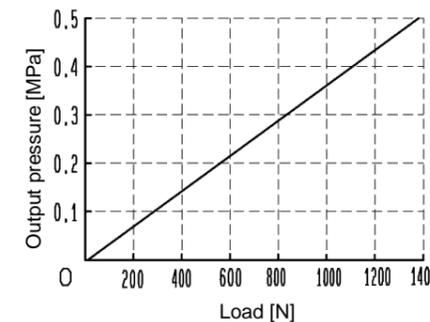

Figure 1

2.3 Operating principle

If a load is applied to the transmission plate B ①, this force will be transmitted to the shaft ③ via the transmission plate A ② and the diaphragm ④ and valve ⑤ will be pushed down.

As a result, part of the supply pressure will be output to the OUT side. The output air pressure acts on the lower side of the diaphragm ④, which counteracts the force pushing down on the diaphragm by the load, this becomes the set pressure. If the load decreases here, the diaphragm ④ will be pushed up by the output pressure and the valve ⑤ will close and then the exhaust valve ⑥ will open.

As a result, the excess pressure on the OUT side will be released to atmosphere. Thus the output pressure changes linearly by the load applied.

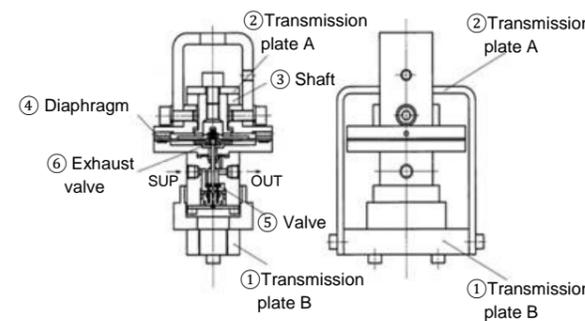

Figure 2

Caution

Special products might have specifications different from those shown in this section. Contact SMC for specific drawings. These drawings will give the appropriate specification details and compliance with the safety principles of ISO 13849, if applicable.

3 Installation

3.1 Installation

Warning

- Do not install the product unless the safety instructions have been read and understood.
- Install and remove any work piece when the supply pressure is applied.
- If a load sensor fails and danger to the system can be predicted, install a safety circuit in the system to avoid danger.
- Use the mounting hole (φ19) in the mounting bracket on top of the load sensor to mount onto the cylinder head.

3 Installation – continued

Use the screw (M22x1.5) on the transmission plate B at the bottom of the load sensor to mount a jig to hang the work piece.

- When mounting, take measures to prevent loosening at the mounting screw section.

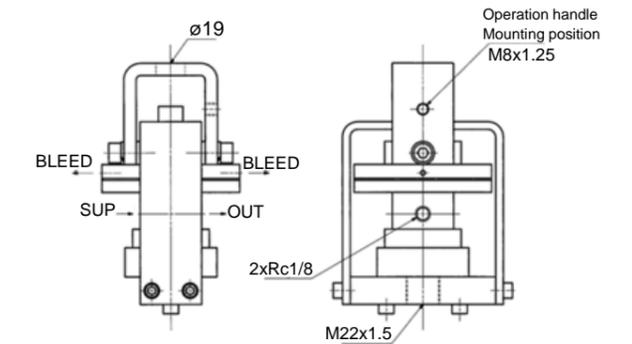

Figure 3

3.2 Environment

Warning

- Do not use in an environment where corrosive gases, chemicals, salt water or steam are present.
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact. Check the product specifications.
- Do not mount in a location exposed to radiant heat.

3.3 Piping

Caution

- Before piping make sure to clean up chips, cutting oil, dust etc.
- When installing piping or fittings, ensure sealant material does not enter inside the port. When using seal tape, leave 1.5 to 2 threads exposed on the end of the pipe/fitting.
- Tighten fittings to the specified tightening torque.

3.4 Air source

Caution

- Install an air filter on the supply side near this product. Select filtration of 5µm or less.
- Compressed air containing a large amount of drain can cause this product or other air compressor to malfunction. Install an after-cooler, air drier or drain catch as countermeasures. Avoid using a lubricator.
- A large amount of carbon powders generated from the compressor can stick inside this product resulting in malfunction.

3.5 Operation

Caution

- Do not use this load sensor outside the specifications because it can cause a product failure.

## 4 Settings

### 4.1 Settings

The XT477-4-X2 load sensor can be used as a balancer by combining with an air cylinder (bore size: 63 mm), an air operated type precision regulator and a speed controller.

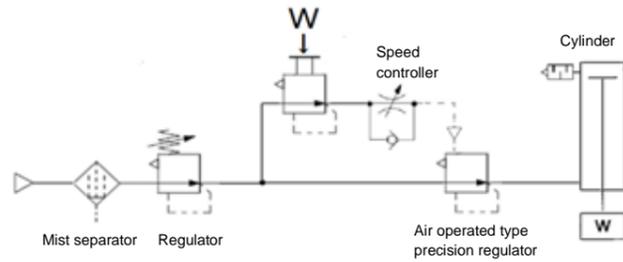

Figure 4

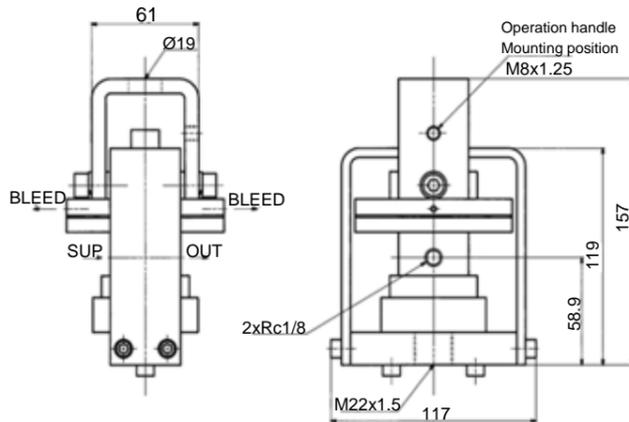

### Caution

- The only air cylinders applicable as balancers are those with a bore size of 63 mm.
- If not fully balanced, fine-tune pressure with an air operated type precision regulator.
- If hunting occurs in the circuit, install a speed controller and a tank on the output side of the load sensor.

## 5 How to Order

Model no: XT477-4-X2

## 6 Outline Dimensions (mm)

## 7 Maintenance

### 7.1 General Maintenance

#### Caution

- Not following proper maintenance procedures could cause the product to malfunction and lead to equipment damage.
- If handled improperly, compressed air can be dangerous. Maintenance of pneumatic systems should be performed only by qualified personnel.
- Before performing maintenance, turn off the power supply and be sure to cut off the supply pressure. Confirm that the air is released to atmosphere.
- After installation and maintenance, apply operating pressure and power to the equipment and perform appropriate functional and leakage tests to make sure the equipment is installed correctly.
- If any electrical connections are disturbed during maintenance, ensure they are reconnected correctly and safety checks are carried out as required to ensure continued compliance with applicable national regulations.
- Do not make any modification to the product.
- Do not disassemble the product, unless required by installation or maintenance instructions.

## 8 Limitations of Use

### 8.1 Limited warranty and Disclaimer/Compliance Requirements

- **The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.**
- **Limited warranty and Disclaimer**
  - 1) The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first<sup>(1)</sup>. Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
  - 2) For any failure or damage reported within the warranty period

which is clearly our responsibility, a replacement product or necessary parts will be provided.

This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3) Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.

<sup>(1)</sup> Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### Compliance Requirements

- 1) The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2) The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

### Caution

- **SMC products are not intended for use as instruments for legal metrology.**

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country.

Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

## 8 Limitations of Use – continued

### Warning

- Any use in an ISO 13849 system must be within the specified limits and application conditions. The user is responsible for the specification, design, implementation, validation and maintenance of the safety system (SRP/CS)
